Science Day March 12th

Dear Parents/Carers,

Re: Science Week (8th -15th March)

Whole School Show and Workshops for Years 1-6

I am writing to tell you about our exciting Science Day on **Tuesday 12th March** and what we have planned for the children.

On **Tuesday 12th March 2019** 'Science Boffins' will be coming to our school on a mission to get children excited about science from a young age. As part of this mission they will deliver fun, interactive and educational science workshops, a whole school assembly and a rocket launch.

Here are some the activities they will be involved in:

Plasma Balls & Playful Polymers

Looking at jaw dropping visual effects from the film industry, our pupils will create Frankenstein-like plasma flashes, have electricity pass through their bodies to light a fluorescent tube, and may even get a shock on their noses! Learning about polymers, our pupils will also make their own slime to take home.

Know Your Newton

One of the greatest scientists in human history and a father of physics brought to the classroom. Learn and test Newton's laws and see his experiments in practice. Gravity, rockets, pendulums and balloons galore.

As part of our fun day, the children can dress up as 'whacky scientists.' For this they could, for example, wear a white lab coat or old large white shirt, funky glasses and crazy hair (this is of course optional).

Thank you for your support.

Yours sincerely,
Mrs T Amos
Science Subject Leader
